# C-A Operations-FY13

# Spin pattern issues

- Two errors in CAD:

- Literal base pattern repetition:

+ + + + - - - - + + + + - - ... and next

+ + + + - - - - + + + + - -

instead of repetition of first 8:

+ + + + - - - - + + + + - - - - + + + + - - - - + + + + - - - -

- Pattern “paused” for empty bunches:

+ + + + - - e e - - + + + +

instead of continuing pattern

+ + + + - - e e + + + +

- New patterns will be set up and called p21-p28 instead

and efficiency

- Increase data taking efficiency over polarization measurements ( ramp down as few detectors as possible, start a new run immediately??) – new shielding will help

# Criteria for start-of-physics

- 109 bunches in the machine
- Longitudinal polarization established, <5% transverse component
- $\geq 55\%$  polarization at the start of the store
- $\text{Beta}^* = 0.65$
- $>1 \times 10^{11}$  protons/bunch
